

## Thermal Transfer Ribbons

### 6 Resin Qualities for **Card Printers**

#### Resin

-  **T 859 Sw**
-  **T 521 Ro** (Pantone 186 C)
-  **T 542 Gr** (Pantone 356 C)
-  **T 562 Bl** (Pantone 300 C)
-  **T 574 Bl** (Pantone 2747 C)
-  **T 516 Go**

#### Reliable Quality for Your Data

We offer high-class, monochrome resin qualities designed especially for card printers. Our products are developed, coated and converted in France — based on more than 25 years' experience in manufacturing thermal transfer ribbons.

The print on PVC cards is resistant against smearing, scratching, sweat and chemicals. We offer 6 standard colours: black, red, green, light blue and dark blue. Customer-specific colours can be produced in certain minimum quantities — please contact us. Our qualities are certified and distributed by major OEMs around the world.

REGMA and CALOR form an independent European company working exclusively in the development, production and sale of thermal transfer ribbons. REGMA in Normandy has been coating film, initially under Japanese licence, since 1986. Our quality management system is certified DIN EN ISO 9001:2008.

As of 2015, our range includes about 45 black qualities as well as 88 colour ribbons on all quality levels.
